STAYCOOL HD MEDIA SPEC SHEET

AMERICA'S MEDIA MANUFACTURING INC.

staycool HD KEY FEATURES

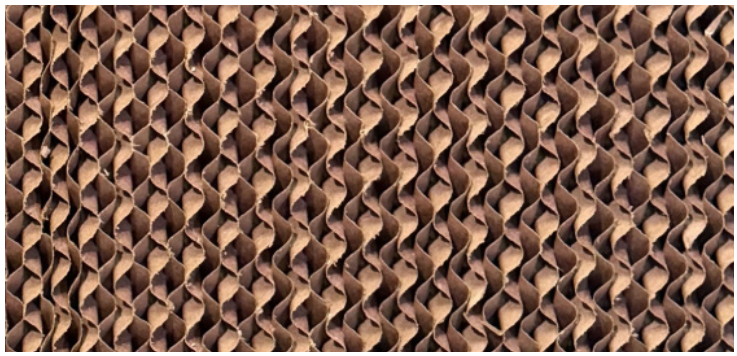

HIGH-DEFINITION FLUTE DESIGN

Featuring a fine 4–5 mm flute profile and a 45°/45° cross-fluted configuration, StayCool HD is engineered to promote effective air-and-water interaction. Its compact flute structure makes it a specialized solution for evaporative cooling applications.

DESIGNED FOR EVERYDAY COOLING

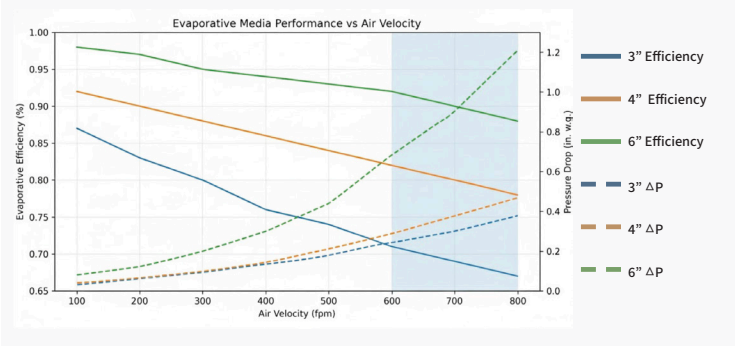

From residential swamp coolers to light-commercial evaporative cooling systems, StayCool HD provides a practical media solution for everyday cooling demands. Its cross-fluted design supports the evaporation process that transforms hot, dry air into cooler, more comfortable air.

ENGINEERED FOR PERFORMANCE

StayCool HD combines a specialized flute profile with a proven cross-fluted design to support efficient heat and moisture exchange. Built for evaporative cooling applications, it offers a focused solution for systems where reliable cooling performance matters.

THE RIGHT FIT FOR EVAP COOLING

When the application calls for a finer flute profile, StayCool HD delivers a purpose-built evaporative media solution. Designed for swamp coolers and other evaporative cooling equipment, it brings together specialized geometry and practical application versatility.
